INTERVIEW CHEAT SHEET

[SELF INTRODUCTION]

John Doe, Bachelor's in Computer Science, experienced Software Engineer skilled in Python, SQL, Docker, FastAPI, Git, React, and Machine Learning, aiming to develop scalable data-driven web applications.

[PROJECT PITCHES]

-> Data-Driven Web App

Build a full-stack application using FastAPI backend with SQL database, Dockerized deployment, and React frontend. Difficulty: integrating real-time data pipelines and ensuring secure authentication; overcome by modular design, automated testing, and continuous integration.

[KEY TECHNOLOGIES]

Python	High-level programming language for backend and data science.
SQL	Structured Query Language for relational database management.
Docker	Containerization platform for consistent environments.
FastAPI	Modern, fast web framework for building APIs.
Git	Version control system for collaborative development.
React	JavaScript library for building interactive UIs.
Machine Learning	Algorithms for predictive modeling and data analysis.

[DSA TOPICS TO REVISE]

• **Arrays**	Ordered collection of elements, supports O(1) access.
• **Linked Lists**	Sequential data structure with dynamic nodes.
• **Trees**	Hierarchical structure, useful for search and sorting.
• **Graphs**	Set of nodes and edges, for network problems.
• **Dynamic Programming**	Optimize overlapping subproblems.
• **Hashing**	Key-value mapping for O(1) lookups.

[HR ANSWERS]

Q: Why this role	I want to apply my full-stack and ML skills to solve real business problems.
Q: Strength	Strong problem-solving, quick learning, and collaborative mindset.
Q: Weakness	I tend to over-commit to details; I'm learning to prioritize tasks.
Q: Long term goal	Lead a cross-functional team building AI-driven products.
Q: Why you hired in this company	The company's focus on innovation aligns with my passion for cutting-edge tech.

Q: What is your salary expectation	Competitive market rate for the role.

[WEAK AREAS TO COVER]

>> System Design: Large-scale architecture and scalability.
